

Evaluation of the Human Factors that Influence the Spatial Difference and Organization of Population Needs of Services (a Study of the Theoretical and Methodical Basis)

Dr. Mamdooh Al-Dibs*

Abstract

The study and evaluation of the circumstances and the factors that affect the geography of the inhabitants services in terms of the needs of services, the use of it and the spatial arrangement is considered one of the major trends in the geographical studies of the sector of population services, and without it, the geographical study of any of the geographical phenomena of services cannot be complete.

The conditions and the human factors differ in its types and influence according to the difference of the goal of the study and its trends; there are factors that influence the production of the services, others influence the positioning of the services and spatial arrangement in the urban centers regions.

The conditions and the human factors contain the quality of the population, their movements, infrastructure, lifestyles, standards, of living, geographical distribution, density, level of civilization and educational, the size of their urban centers- its density, structure, and function-, and the level of scientific and technical development of their society, in addition to the management, and the government policy in the services aspect, the security, the political constancy and finally the environmental situation.
