

## **Technological Revolution and its Impact on Changing Values**

**Dr. Ezzat Assayed Ahmad\***

### **Abstract**

The change in values was not a problem in the past. Often things were going quietly and logically. Sometimes it went in a revolutionary way or large leap. But the technological revolution, the revolution that began in the late twentieth century, and continues strongly until now, led to serious changes in the value system of human societies. But more serious is that these changes were still at the beginning of the road.

The industrialized societies, especially the European, American and Japanese were subject to the effects of this revolution. Some values have been changed in ways that may not be clear because of the integration of this revolution, this revolution as well exit from these communities. But other communities are coming to serious changes in values, there will be an almost total contradiction with their value system, customs and traditions.

So, humanity is going to major changes and serious systems of values, customs and traditions and modes of thinking. There is no doubt that there are positive changes are Sometimes, but the negative effects or negative changes are sometimes beyond what can be positive. This calls for alarm bells.

**Keywords:** change, value, revolution, technology, people, society, electronic, engineering.
