

The Approach and Method in Human Geography

Dr. Ali Diab*

Abstract

It is important for any science –including Human Geography- to follow the scientific development and to keep up with other sciences, to develop the elements of scientific research system, the most prominent ones of which are: Approach, and Method.

There is a kind of imprecise or misuse of the words: (Approach), (Method). While the Approach represents a base or philosophic and methodic background for the researcher and his strategy, the Method is considered as a tactic mean researcher can use it to handle the principal issues of the science, which is the discovery of objective laws of the world.).

The study of the geographic science today (in current circumstances) depend on a number of approaches, the most important of it Historic approach, Regional approach, problematic Approach, and.....etc. In addition, it depends on the system of research methods as cartographic method, mathematical method, and modeling and.....etc.
